

### Technical data

Material		
Backing	Special PP fleece	
Adhesive	Water-resistant SOLID adhesive	
Release film	Siliconised paper	
Property		
Colour	Dark blue	
Outdoor exposure	6 months	
Bond durability, non-aged/aged	DIN 4108-11 / EN 17990	Passed
Can be plastered over	Yes	
Application temperature	Above -10 °C ; +14 °F	
Temperature resistance	Permanent -50 °C to 90 °C ; -60 °F to 194 °F	
Storage	Cool and dry	

### Areas of application

For simple, quick and permanently sealed adhesion of blown-in insulation holes and for repairs.

### Supply form

Art. no.	Length	Width	Weight	Sales unit	Container	GTIN
10795	180 mm	180 mm	0.52 kg	1	1440	4026639016560
10595	180 mm	180 mm	1.8 kg	1	144	4026639016553

### Advantages

- ✓ Saves time: ready-to-install adhesive plaster, protruding release film is easy to remove
- ✓ Adheres reliably, even if moisture is present: water-resistant SOLID adhesive
- ✓ Subsequent work can be carried out with increased flexibility: 6 months of outdoor exposure
- ✓ Subsequent work can be started quickly: fleece backing can be plastered over directly
- ✓ Construction in adherence with standards: for airtight sealing in accordance with DIN 4108-7, SIA 180 and RE 2020
- ✓ Excellent values in hazardous substance testing, has been tested according to the ISO 16000 evaluation scheme

### Substrates

Clean subsurfaces before sticking. Adhesion to frozen surfaces is not possible. There must be no water-repellent substances (e.g. grease or silicone) on surfaces where adhesives are to be applied. Subsurfaces must be sufficiently dry and stable.

Permanent adhesion is achieved on all pro clima interior and exterior membranes, other vapour control and airtight membranes (e.g. those made of PE, PA, PP and aluminium) as well as other roof and breather (WRB) membranes (e.g. those made of PP and PET).

Adhesive bonds are possible on planed and painted wood, hard plastics and metal (e.g. pipes, windows etc.), hard wood-based panels (chipboard, OSB, plywood, MDF and wood-fibre underlay panels). Pre-treatment with TESCON PRIMER is required in the case of adhesion to wood-fibre underlay panels and smooth mineral subsurfaces. Concrete or plaster subsurfaces must not be sandy or crumbling.

The best results in terms of structural stability are achieved on high-quality subsurfaces. It is your responsibility to check the suitability of the subsurface; adhesion tests may be necessary in certain cases. Pre-treatment with TESCON PRIMER is recommended in the case of subsurfaces with insufficient stability.

### General conditions

The adhesive bonds should not be subjected to tensile strain. Rub the adhesive tapes firmly to secure the adhesive bonds. Ensure that there is sufficient resistance pressure. Windproof, airtight or rainproof sealing can only be achieved on vapour control membranes, roofing underlays or breather (WRB) membranes that have been laid without folds or creases. Ventilate continuously and systematically to prevent build-up of excessive humidity; use a dryer if necessary.

\*Information sur le niveau d'émission de substances volatiles dans l'air intérieur, présentant un risque de toxicité par inhalation, sur une échelle de classe allant de A+ (très faibles émissions) à C (fortes émissions)

The information provided here is based on practical experience and the current state of knowledge. We reserve the right to make changes to the recommended designs and processing or to make alterations due to technical developments and associated improvements in the quality of our products. We would be happy to inform you of the current technical state of the art at the time you use our products.

Further information about application and construction is given in the pro clima planning documentation and application recommendations. If you have any questions, please call the pro clima technical hotline Ireland and UK:
